

FMX Solutions starts operations in North America

FMX Solutions provides banking, transportation and telecommunication industries with the necessary tools and services to manage buildings, assets and infrastructures.

Montreal, June 30th, 2005 – FMX Solutions Inc., a facility, cable and network management service provider, announced the opening of its Montreal, Canada, office. FMX Solutions brings to its customers services that are at the cutting edge of its market being the only one with the capabilities to combine the management of all physical networks with facilities.

FMX Solutions provides high-end engineering services related to IT infrastructure management as well as Facility Management thanks to processes and methods that use state of the art software such as Building One or Building Management Concept (BMC).

BUILDING One is an Object-Oriented GIS software capable of managing such diverse aspects of inside and outside plants as cabling infrastructure, building layout and space allocation, Voice and Data networks, fiber optic, automatic patching schedules, Moves-Adds-and-Changes, asset-tracking, occupant positions, desktop equipments and connectivity, charge-back billing calculations, telephone directories, traffic management devices, inventories, M&E equipment and Operations manuals, inter-building cabling and project simulations.

BMC is a state of the art web-based cable management software. Thanks to its native web-based architecture, the BMC client is fully functional through a web browser. It manages all infrastructure components like voice & data, low-voltage power supply, wireless, fluids, IT equipments, users, furniture through a user friendly interface. BMC provides advanced features such as SNMP control and audit (automated data gathering on SNMP-managed devices), data coherency control, PBX audit and update.

Managing IT network infrastructures these past years has become more and more mission critical for medium and large size companies. FMX Solutions has developed its expertise to meet its customers' new requirements utilizing cable management software tools to provide services to facilitate and automate many IT fields. It allows clients to rely on high-level design and engineering services that range from network infrastructure design and management to software deployment and maintenance.

Facility Management services range from asset and space management to property and workplace management. FMX Solutions' goal is to optimize customers' infrastructure usage and allocation in order to lower the per square feet cost.

"FMX Solutions' staff has acquired an extensive expertise designing, managing and maintaining cabling infrastructure thanks to the deployment of complex software platforms for Fortune 500 companies" says Olivier Botz, VP Engineering for FMX Solutions.

"FMX Solutions ' Team assess clients needs to select the relevant technologies to deploy with one objective in mind: customer's satisfaction" says Xavier Bougot, VP Business Development for the company. *"We are a true alternative to existing CAFM suppliers thanks to a much better return on investment due to a very high level of practical experience and know-how combined with a high degree of independency"*.
